

# WHEN TO WASH YOUR HANDS

Cleaning hands at key times with soap and water or hand sanitizer that contains at least 60% alcohol is one of the most important steps you can take to avoid getting sick and spreading germs to those around you. There are important differences between washing hands with soap and water and using hand sanitizer.

**Soap and water work to remove all types of germs from hands, while sanitizer acts by killing certain germs on the skin.**

## KEY TIMES TO WASH YOUR HANDS

CDC recommends washing hands with soap and water whenever possible because handwashing reduces the amounts of all types of germs and chemicals on hands.

Before, during, and after preparing food

Before eating food

Before and after caring for someone who is sick

Before and after treating a cut or wound

After using the toilet

After blowing your nose, coughing, or sneezing

After touching garbage

If your hands are visibly dirty and greasy

### TIP

If soap and water are not readily available, use an alcohol-based hand sanitizer that contains at least 60% alcohol, and wash with soap and water as soon as you can.
